

Call for 2022 Summer Schools Proposals

Important Dates

- Eligible period: **April 2022 to December 2022**
- Deadline for submitting the proposal: **1 April 2022** (late submissions may also be considered, but subject to the availability of the budget balance)
- Notification of the outcome of the review process: **15 April 2022**

You are encouraged to submit a proposal to hold a CIS summer school in Computational Intelligence from **April to December 2022**. If the proposal is approved, and upon request, CIS will provide a financial contribution to support the initiative. The amount of the financial support from CIS depends on the available budget, the number of financed proposals and the soundness of the school budget. We recall that organizers can take advantage of other initiatives, e.g., the CIS Distinguished Lecture Program to further support the school (related regulations apply). We encourage proposals to collocate summer schools with our CIS conferences.

The CIS Summer schools subcommittee will review received proposals based on the following criteria:

1. The quality of the proposed technical program and topic balance;
2. The length of the school;
3. The geographical balance of the proposals.

In writing your proposal, please address the following aspects:

1. Aim and target.
2. Courses and lecturers.
3. Tentative program.
4. Local organizer(s).
5. Registration and accommodation.
6. School budget, financial sponsor(s) and requested co-finance from CIS.

A [template](#) for the proposals and more details can be found at the Summer School Subcommittee website: <https://cis.ieee.org/professional-development/summer-schools>.

Please send your completed documents to the Summer Schools Subcommittee Chair, Alexander Dockhorn, at dockhorn.alexander@gmail.com, by the deadline.
